

Econoliser Self Heating Electric Knife Sterilizer 82°C

SPEC SHEET

PRODUCT CODE: S-TK02-E03-001

KEY FEATURES

The FlowQuip Econoliser - The smart way to sterilize abbot knives.

Designed to replace the traditional constant flow or water bath type sterilizer with the emphasis on using as little water as is needed and yet still delivering better results when it comes to sterilizing the tool.

- A 95% reduction in the water used is normal when compared to constant flow immersion sterilizers. Uses only 140ml of water per cycle.
- 95% reduction in the cost of heating the water.
- Virtually no steam is produced, to condense on overhead equipment and drip onto carcasses.
- No tank of hot water, zero risk of scolding, and more comfortable to work next to.
- Fully automatic operation gives consistent results with any operator.
- New knives hold their edge longer because they aren't sitting in a tank of hot water which anneals them
- Built-in electric water heater which means the water supply can be anything from cold 0°C/32°F up to 90°C/180°F and the built-in water heater will ensure that it is above 82°C/180°F
- Electric from a renewable source can now be used for sterilisation of knives and tools helping users to reduce their dependence on fossil fuels and reducing their carbon footprint.

Hot or Cold water supply. 15mm threaded connection.
Minimum pressure, 3 bar.
Flowrate 4.2L/Min

Electrical Req.
230v 1ph
11 amps

SS 1-1/4" Drain
Connection
